About

Full Stack Engineer specializing in real-time web application, scalable systems and high-performance backend. Experienced in end-to-end product development with hands-on expertise in modern technologies. Passionate about building scalable and high-performance production ready web applications.

Education

IIMT College Of Engineering

Bachelor of Technology in Computer Science & Engineering, Specialization in Artificial Intelligence

Greater Noida, India

OCT. 2023 – FEB 2027

Relevant Coursework – Data Structures & Algorithms, Operating System, DBMS, Computer Networks & Object-Oriented Programming

Technical Skills

Languages – Typescript, JavaScript, Python, C/C++

Frontend – React.js, Next.js, Tailwind CSS, Redux Toolkit

Backend – Node.js, Express.js, REST APIs, JWT, OAuth, Mongoose ODM, Prisma

Databases – MongoDB & PostgreSQL

Distributed Systems – Redis, Kafka, WebSockets

Tools – Docker, Git/Github, CI/CD, Postman

Concepts: Distributed Systems, Microservices, System Design, Real-Time Architecture, Event-Driven Architecture

Experience

Full Stack Developer | Startup4Nation (Community)

OCT. 2024 – FEB 2026

- Built a **QR-based** participant onboarding platform that enabled organizers to onboard **2,000+ attendees** while reducing manual check-in time by 80%.
- Built and deployed a **full-stack web application** enabling judges to upload marks of the project on the portal and improving evaluation transparency and reducing result publication delays.
- Designed and deployed responsive event **landing pages** such as **MIH 3.0**, **MIH 4.0** that improved participant engagement and registration experience across desktop and mobile devices.

Projects

Exchange-x | Typescript, Node.js, Next.js, Redis, Kafka, MongoDB, WebSockets

[Live Demo](#) | [Github](#)

- Developed a **full-stack cryptocurrency exchange platform** enabling users to place real time buy and sell orders with live prices feeds and instant wallet updates, built to handle high throughput concurrent orders.
- Built an **Order Matching Engine** that matches buy and sell orders based on price-priority, integrated **Kafka** for **high-throughput** orders processing and **Redis** for low-latency caching, and maintained an **Order book** for resting orders with WebSocket integration to push real-time price updates and order notifications.
- Validated system performance using Grafana k6 load testing with 1000 concurrent virtual users, and successfully processing **156k+** orders at **2,606 req/sec** with **100% success rate**, **0 failed orders**, and min latency of **1.06ms** — validating the system's performance under extreme concurrent load.

QR-Based Event Management System | Typescript, Node.js, Next.js, PostgreSQL, REST API

[Live Demo](#) | [Github](#)

- Built a QR Code based verification system using Next.js that enabling to verify participants through QR code scanning and reducing manual check-in time.
- Developed a JWT based secured evaluation platform using Node.js and PostgreSQL, that helps mentors and judges to seamlessly record teams scores.

Extracurricular Activities

Fetch-a-thon 2.0

National Institute of Technology, Delhi

- Organized a 12-hour **uAgent empowered** hackathon at **NIT Delhi** in collaboration with **Fetch.ai** and I was awarded by the director of **NIT Delhi** for successfully managing the event.

Mind Installers Hackathon 3.0, 4.0

IIMT College Of Engineering, Greater Noida

- Led technical operations for a 30-hour hackathon attended by hundreds of participants, managing registration systems, evaluation infrastructure, QR-based check-ins, and live event support.
